# Hygiene

A selection of reliable, safe Hygiene Devices, produced with high quality and technical materials.

**Due to the inflow of patients, technical health personnel and frequent contact with external agents, hospital departments can act as a vehicle for the proliferation of bacterial and viral contamination and infections.**

The hygiene of medical staff and patients is therefore decisive to break down as much as possible the risk of contamination that could compromise the health of the inpatients.

## Oral hygiene of the patient

**The oral cavity is a source of infections such as hospital-acquired and ventilator-associated pneumonia (VAP).**

The presence of dental plaque, mucus and secretions facilitates bacterial colonization of the area and the proliferation of pathogens, increasing the patient's stay in the intensive care unit.

To prevent the onset of such pathologies, it is appropriate to develop and implement a complete hygiene protocol that may include the use of disinfectants, the use of appropriate safeguards and hydration of the oral cavity, to protect the patient's health in the best possible way, while also allowing the hospital to save money.

## Hygiene of the hands for operators and inpatients

**It is fundamental to grant Hands' Hygiene** of both healthcare personnel and patients during the preoperative procedures, to reach excellent hygienic conditions and prevent any risk of infection.

# Oral Swab

Ideal in:  Intensive Care Unit

## Three different types of oral hygiene swabs for patients, partially collaborating or intubated.

The operator must guarantee oral hygiene assistance to the patient if the latter is conscious or partially conscious; in more serious cases, the operator must personally perform all operations.

HYGIENE

## Cleaning Swab

Cleaning Swab in addition to removing residues present in the oral cavity stimulates the gingival tissue. Equipped with a soft foam head with marked ridges, it also allows interdental cleaning eliminating the part of devitalized tissue. It can also be used for the application of soothing creams.

Available with (IG011000B) and without bicarbonate (IG011000).

PRODOTTI MEDICALI

## Hand hygiene for operators and patients

Surgical preparation of the hands represents a critical moment for the safety of health care; It aims to reduce the release of cutaneous bacteria from the hands of the surgical team for the whole duration of the procedure, so that in case of hypothetical undetected breakage of the surgical glove, no bacteria contaminate the operating field.

Operating Room

IGO11010

### Surgical scrub brush

Designed for comfort and adaptability. Gentle on the skin, avoids irritation, reducing the risk of infections. Soft bristles for nails and knuckles and sponge for hands and forearms skin.

Equipped with a nail cleaner.
